

**TRIDENT**

## Who We Are.

At TRIDENT, we specialise in the design, manufacture, and installation of exquisite bespoke swimming pools, spas, and wellness suites — tailored for the most discerning residential and commercial settings.

Partnering with elite developers, leading architectural studios, luxury hotel brands, and private clients, our consultants curate each project with meticulous care — ensuring every detail aligns with the client's vision and meets or exceeds the rigorous standards set by the Pool Water Treatment Advisory Group (PWTAG).

Our installations are executed by highly skilled engineers, with every stage overseen by accredited project managers recognised by the Institute of Swimming Pool Engineers (ISPE).

Exceptional doesn't end at completion. We provide dedicated aftercare, servicing, and maintenance.

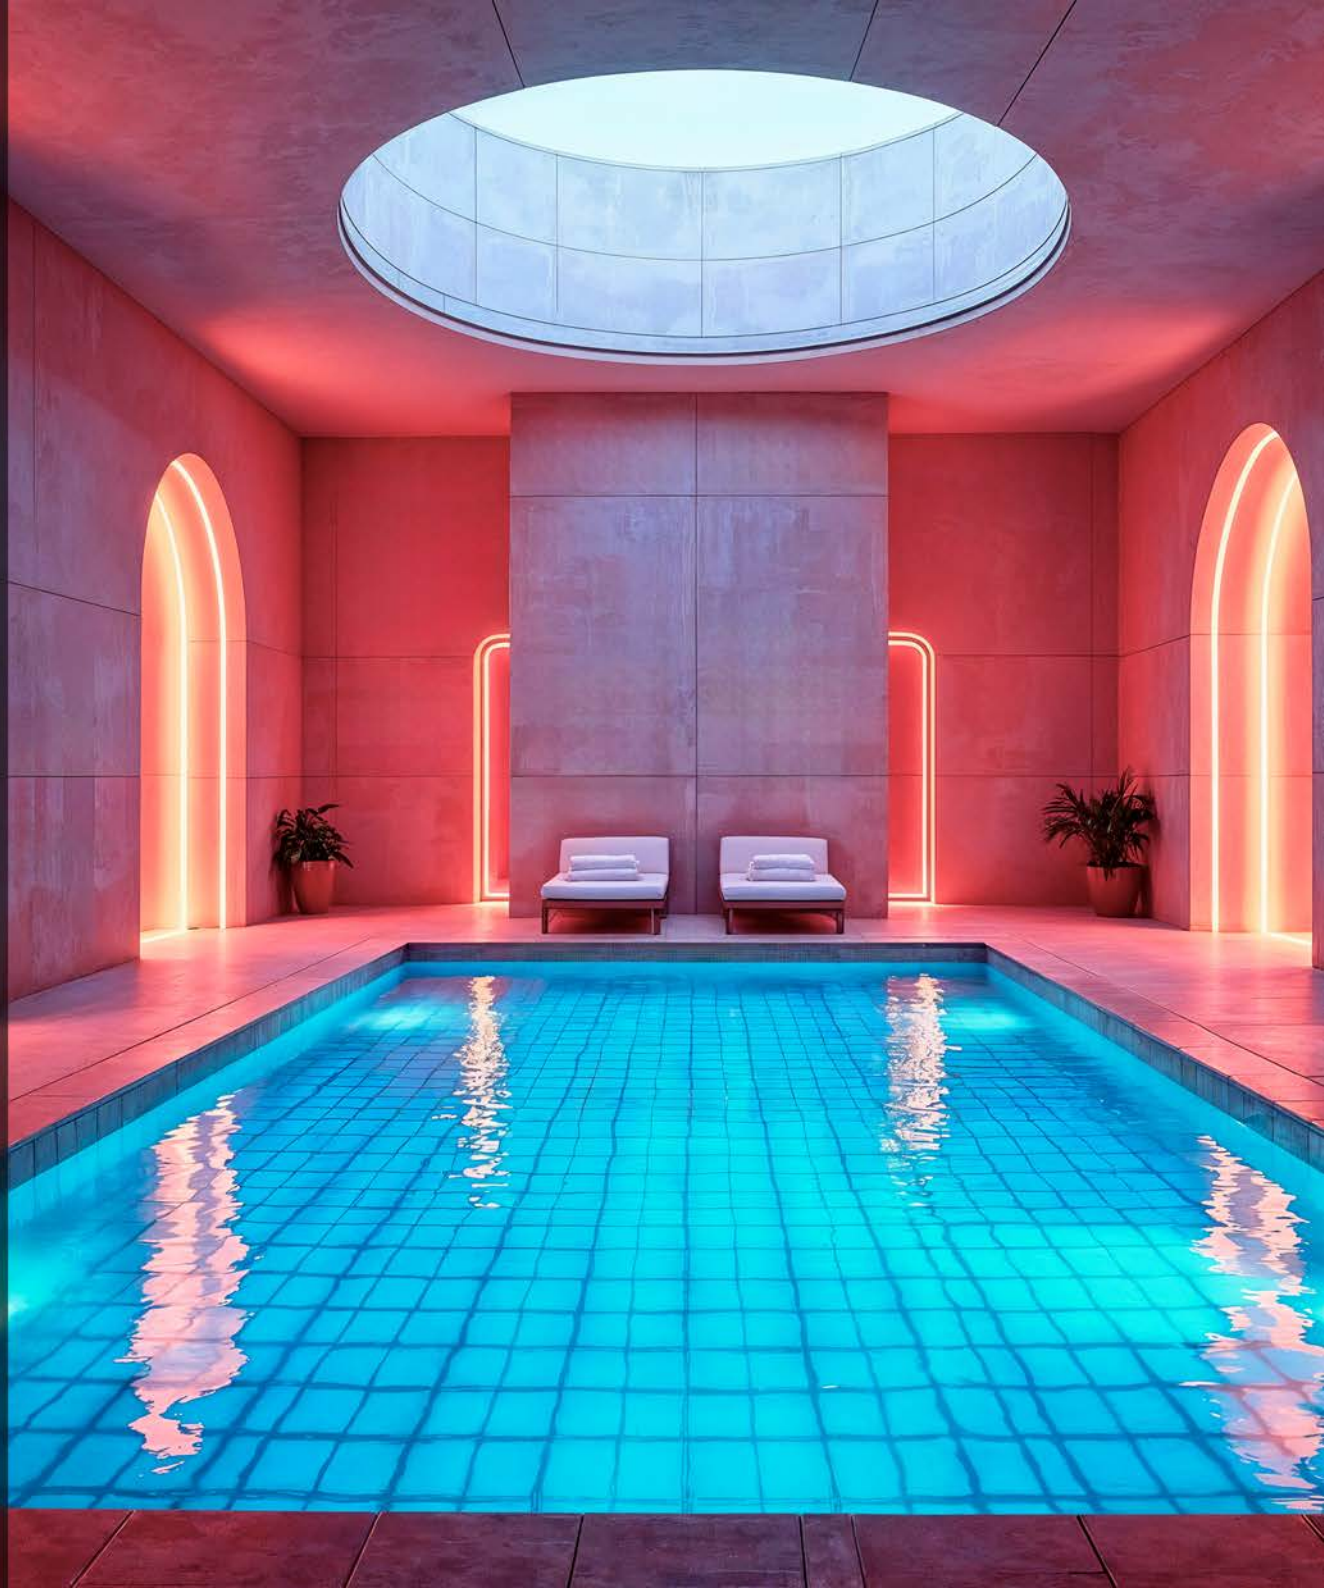

## From Concept To Completion.

Every exceptional pool begins with an idea. At TRIDENT, our experienced design team transforms your concept into a fully realised vision — combining creativity with technical expertise.

From there, our accredited project managers and skilled engineers oversee each stage of the build, ensuring every detail is delivered to the highest standard. The result? A bespoke, beautifully engineered space designed around you.

## Swimming Pools.

From sleek infinity edges to elegant deck-level or classic skimmer styles — we design and build pools of every type, both above and below ground.

Whether constructed in-situ using reinforced concrete or precision-manufactured offsite in GRP and craned into position, every pool is delivered with exacting standards and flawless execution.

From compact circular plunge pools to full Olympic-size installations, TRIDENT has the expertise to meet your vision — whatever the scale.

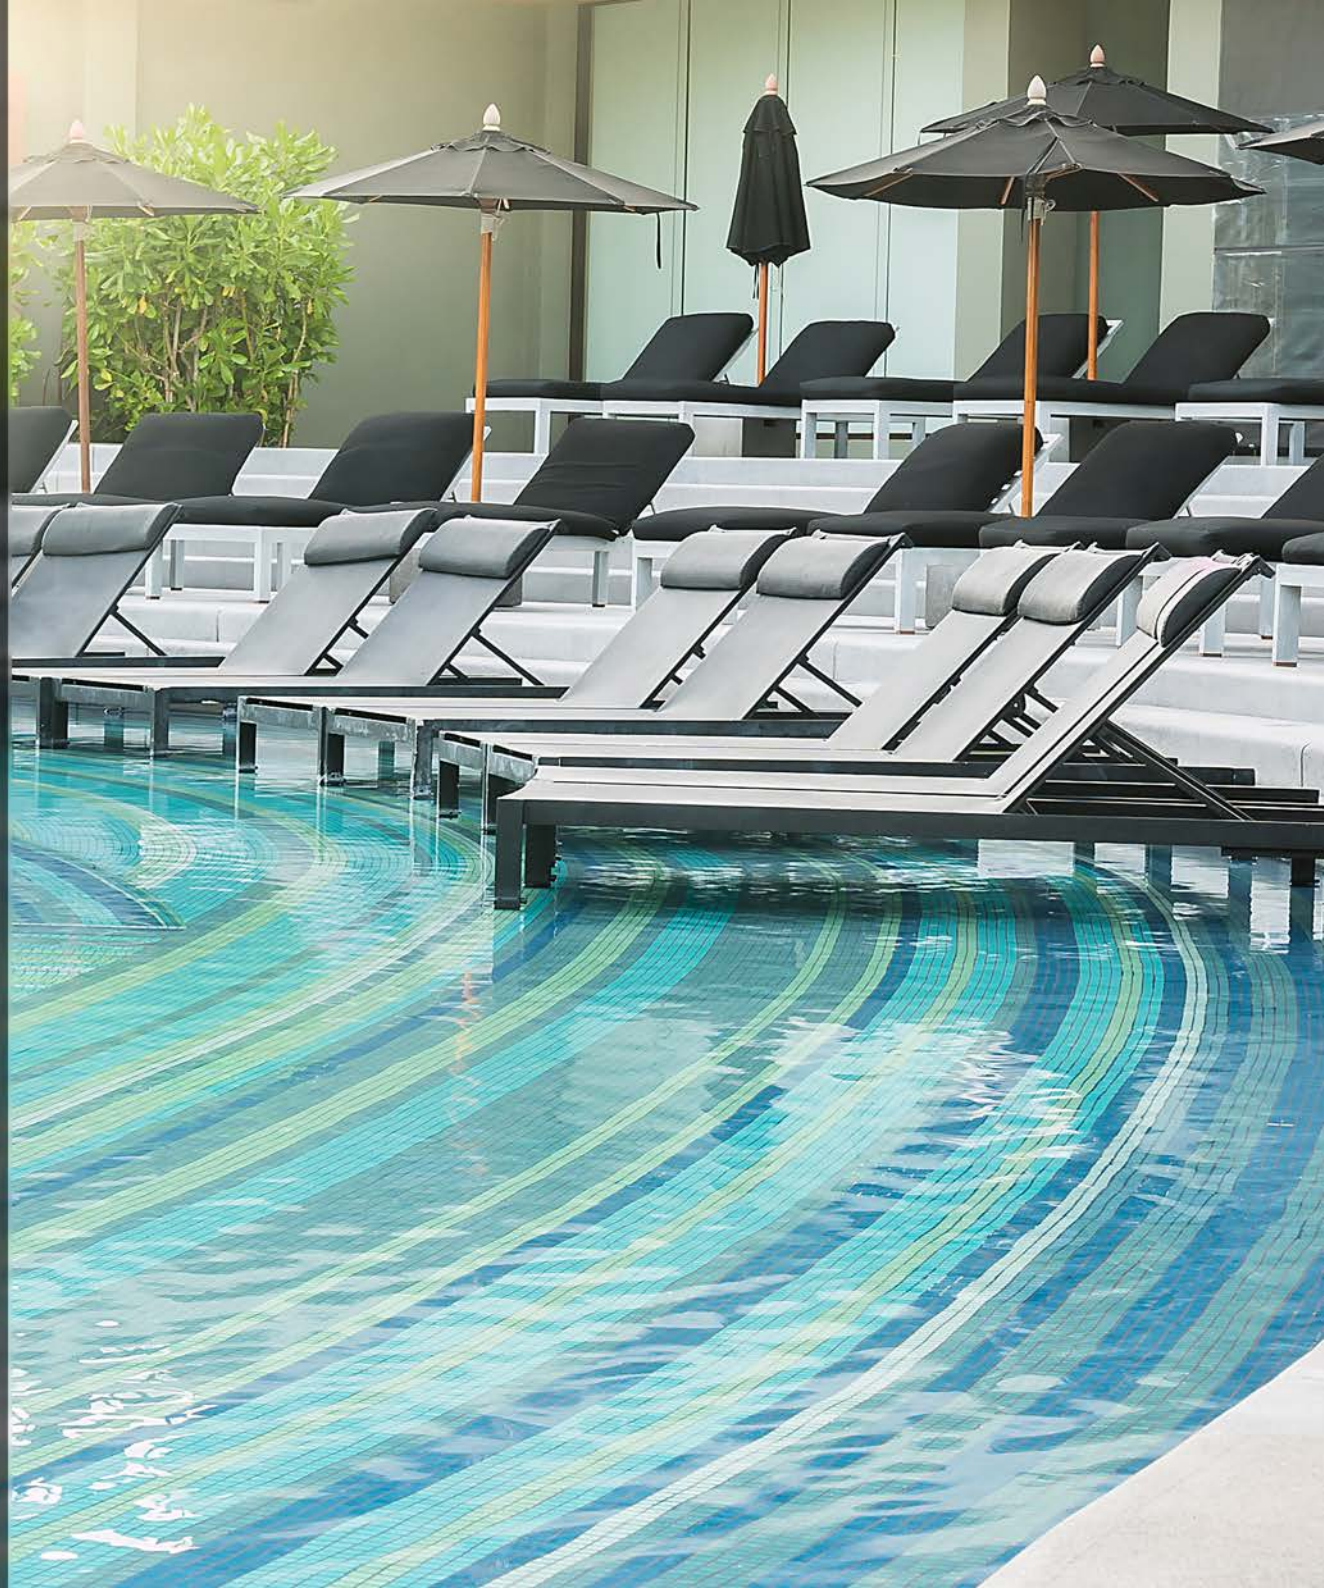

## Sectional Pools.

Access constraints, tight footprints, or urban complexity — none of these prevent us from delivering flawless luxury.

TRIDENT offers a modular pool construction service, where bespoke pools are manufactured in sections here in the UK. These are delivered fully tiled, pre-fitted with plumbing and lighting systems, and joined on-site with absolute precision.

The result? A seamless, structurally-sound pool that looks and performs like a single-shell installation.

Whether it's a rooftop wellness suite, an inner-city courtyard, or a basement spa — we bring luxury, wherever it's needed.

## Spa Pool & Swim Spa.

Every TRIDENT pool is a bespoke creation — designed entirely around your vision, with feature options including swim jets, counter-current systems, and an array of wellness-focused enhancements.

Constructed in either concrete or GRP, and available in sectional form for more challenging sites, each pool is engineered with precision and purpose — whether for leisure, rehabilitation, or high-performance use.

Optional extras include integrated air pads, massage jets, decorative fountains, and cascading waterfalls — all crafted to enrich the experience and elevate every environment.

### **Hydrotherapy Pools.**

Our hydrotherapy pools are purpose-built for therapeutic use — ideal for rehabilitation following injury, supporting chronic conditions, or enhancing mobility through gentle aquatic movement.

Maintained at a consistent temperature of 34–35°C, these pools provide optimal conditions for recovery, comfort, and low impact therapy.

Each pool is designed to suit your specific needs, including bather capacity, accessibility, and treatment goals — delivering tailored wellness through intelligent design.

## **Interactive Water Features.**

Immersive, inclusive, and irresistibly fun — interactive water play is a growing trend in resorts, hotels, waterparks, campgrounds, zoos, and even urban shopping centres.

TRIDENT brings these vibrant spaces to life with bespoke spray park designs tailored for safety, excitement, and long-lasting appeal. From gentle splash zones to dynamic multi-level play structures, we turn bold ideas into fully engineered attractions.

Watch your concept become reality — with creativity, precision, and play at its core.

## Cold Plunge & Ice Baths.

Cold plunge therapy — also known as cold water immersion — is a timeless wellness ritual embraced by athletes, wellness enthusiasts, and spa clients alike.

Brief immersion in chilled water has been shown to reduce inflammation, relieve muscle soreness, elevate mood, and potentially enhance cognitive performance.

TRIDENT designs and installs premium cold plunge pools as part of integrated wellness suites or standalone features, combining functional therapy with elegant form — delivering both impact and indulgence.

## Finnish Sauna.

The Finnish sauna is a timeless tradition rooted in wellness, delivering deep, restorative heat through dry air. Unlike steam rooms, where humidity dominates, Finnish saunas maintain a low moisture level — typically between 5–20% — allowing for higher temperatures and a purer thermal experience.

Operating between 80–100°C, the dry heat encourages relaxation, improves circulation, and helps release muscular tension — all within a calming, wood-lined environment designed to soothe both body and mind.

TRIDENT crafts bespoke Finnish saunas tailored to your space and aesthetic, combining authentic materials with precision engineering for a refined spa experience.

## Infrared Sauna.

Infrared saunas offer a modern take on traditional heat therapy — using gentle infrared light waves to warm the body directly, rather than heating the surrounding air.

This milder, more accessible heat makes infrared therapy ideal for extended sessions, promoting relaxation, detoxification, and improved circulation. Research suggests potential benefits for a range of conditions including high blood pressure, arthritis, chronic pain, type 2 diabetes, and even cognitive support in cases such as Alzheimer's and dementia.

TRIDENT designs and integrates custom infrared saunas with precision — blending innovation with wellbeing to elevate your wellness space.

## Steam Rooms.

Steam rooms create an enveloping, warm mist environment — typically maintained between 40–50°C with humidity levels close to 100%.

This luxurious combination of heat and moisture offers a wide range of health and wellness benefits. It helps to ease muscle tension, promote circulation, and create a deeply calming, stress-reducing atmosphere.

The steam also aids in respiratory relief by loosening mucus, while simultaneously cleansing and hydrating the skin for a radiant, revitalised appearance.

TRIDENT designs fully customised steam rooms — from sleek contemporary enclosures to traditional tiled chambers — delivering serene, spa-grade experiences in both residential and commercial spaces.

## Hammams.

Rooted in centuries of tradition, the hammam is a ritual of cleansing, connection, and deep relaxation. Inspired by Roman thermae and widely embraced across the Islamic world, the hammam is more than a steam bath — it's a timeless wellness experience.

At the heart of the space lies a heated central marble slab, where guests recline and unwind in a warm, humid environment designed to soothe both body and mind. Gentle exfoliation, steam, and therapeutic rinsing rituals complete the experience, promoting circulation, detoxification, and inner calm.

TRIDENT creates bespoke hammams that honour this cultural legacy while elevating it with modern materials, lighting, and spa-grade comfort — tailored for private residences, hotels, or wellness retreats.

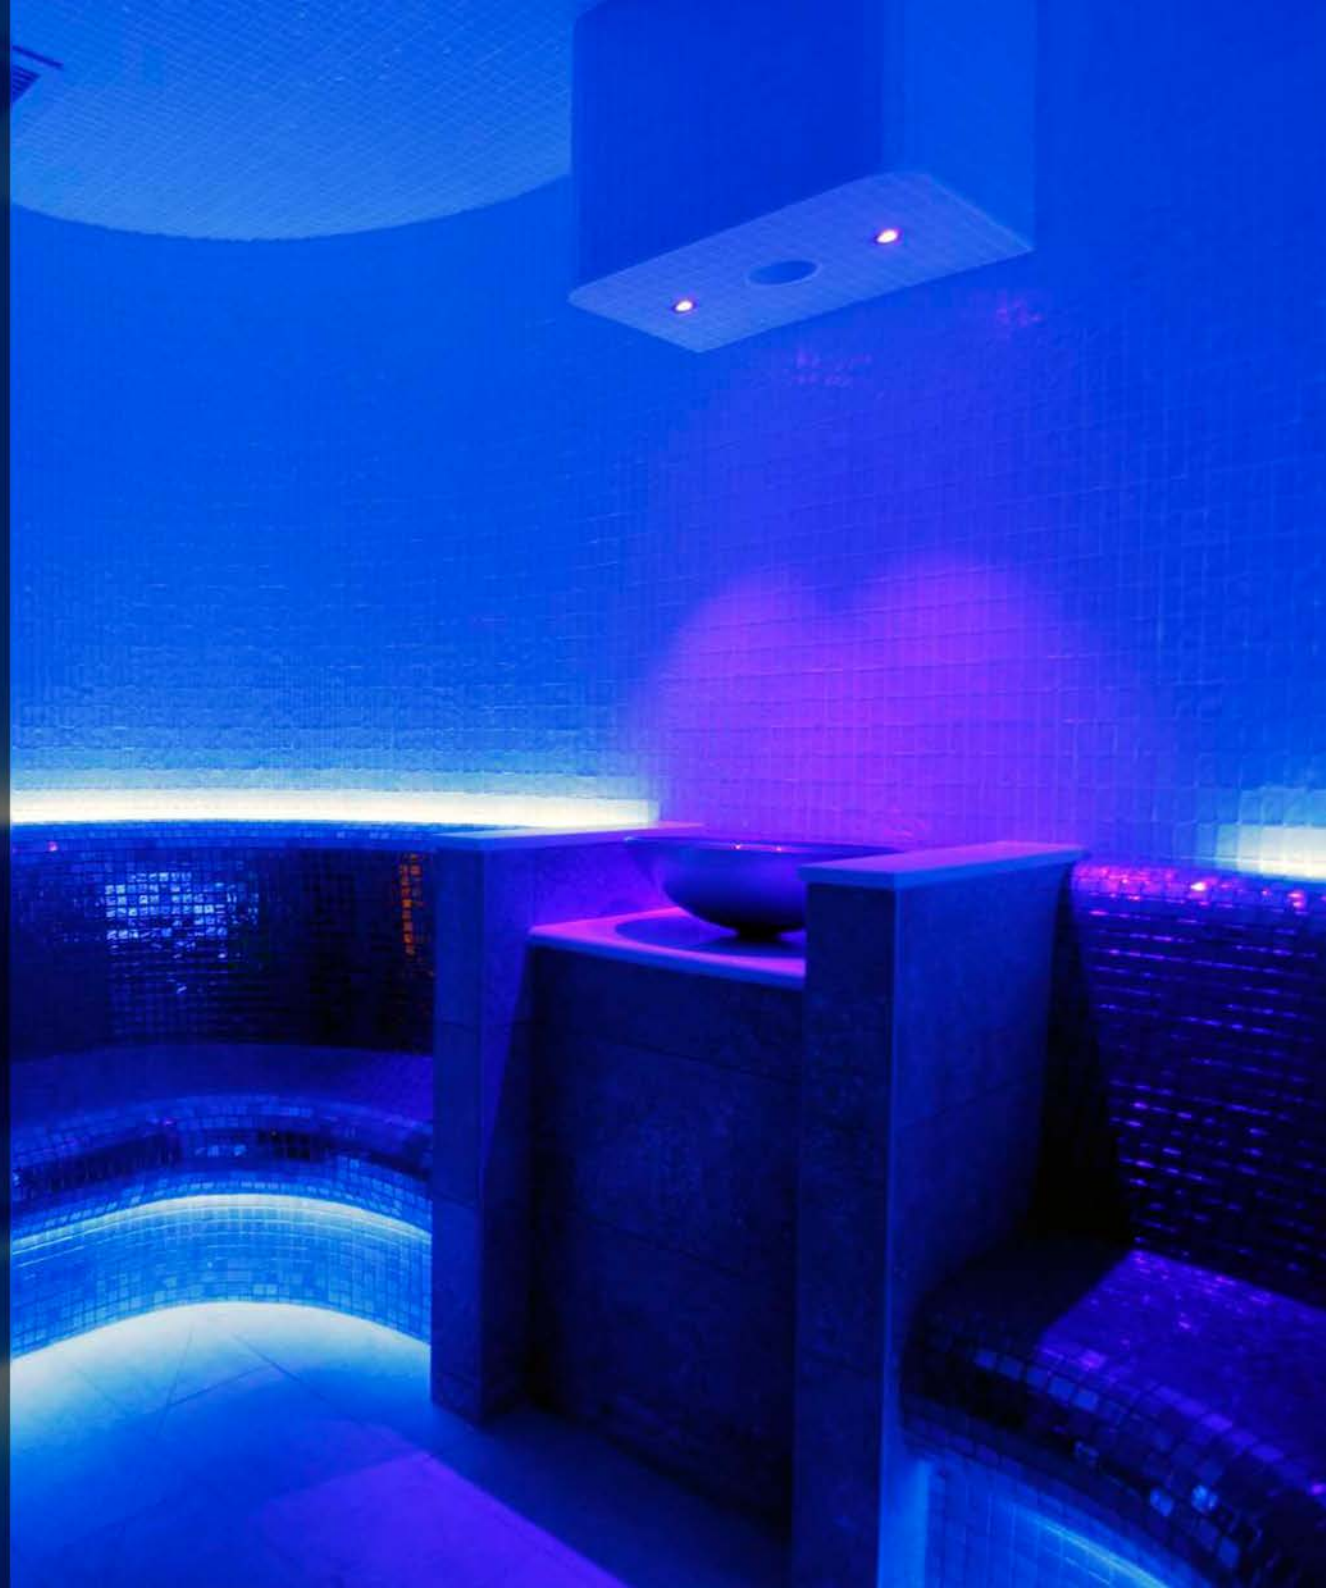

## Ice Rooms & Snow Caves.

Ice rooms and snow caves offer an invigorating counterpoint to heat-based therapies — delivering a sensory shock that stimulates circulation, reduces inflammation, and revitalises the body.

Imagine stepping into a chilled retreat where finely crushed ice refreshes the skin and awakens the senses. This contrast therapy enhances the benefits of saunas and steam rooms, creating a complete thermal cycle rooted in balance and wellbeing.

TRIDENT offers a range of bespoke ice experiences — from compact, space conscious solutions to dramatic snow cave installations that act as striking focal points and gathering spaces within your wellness suite.

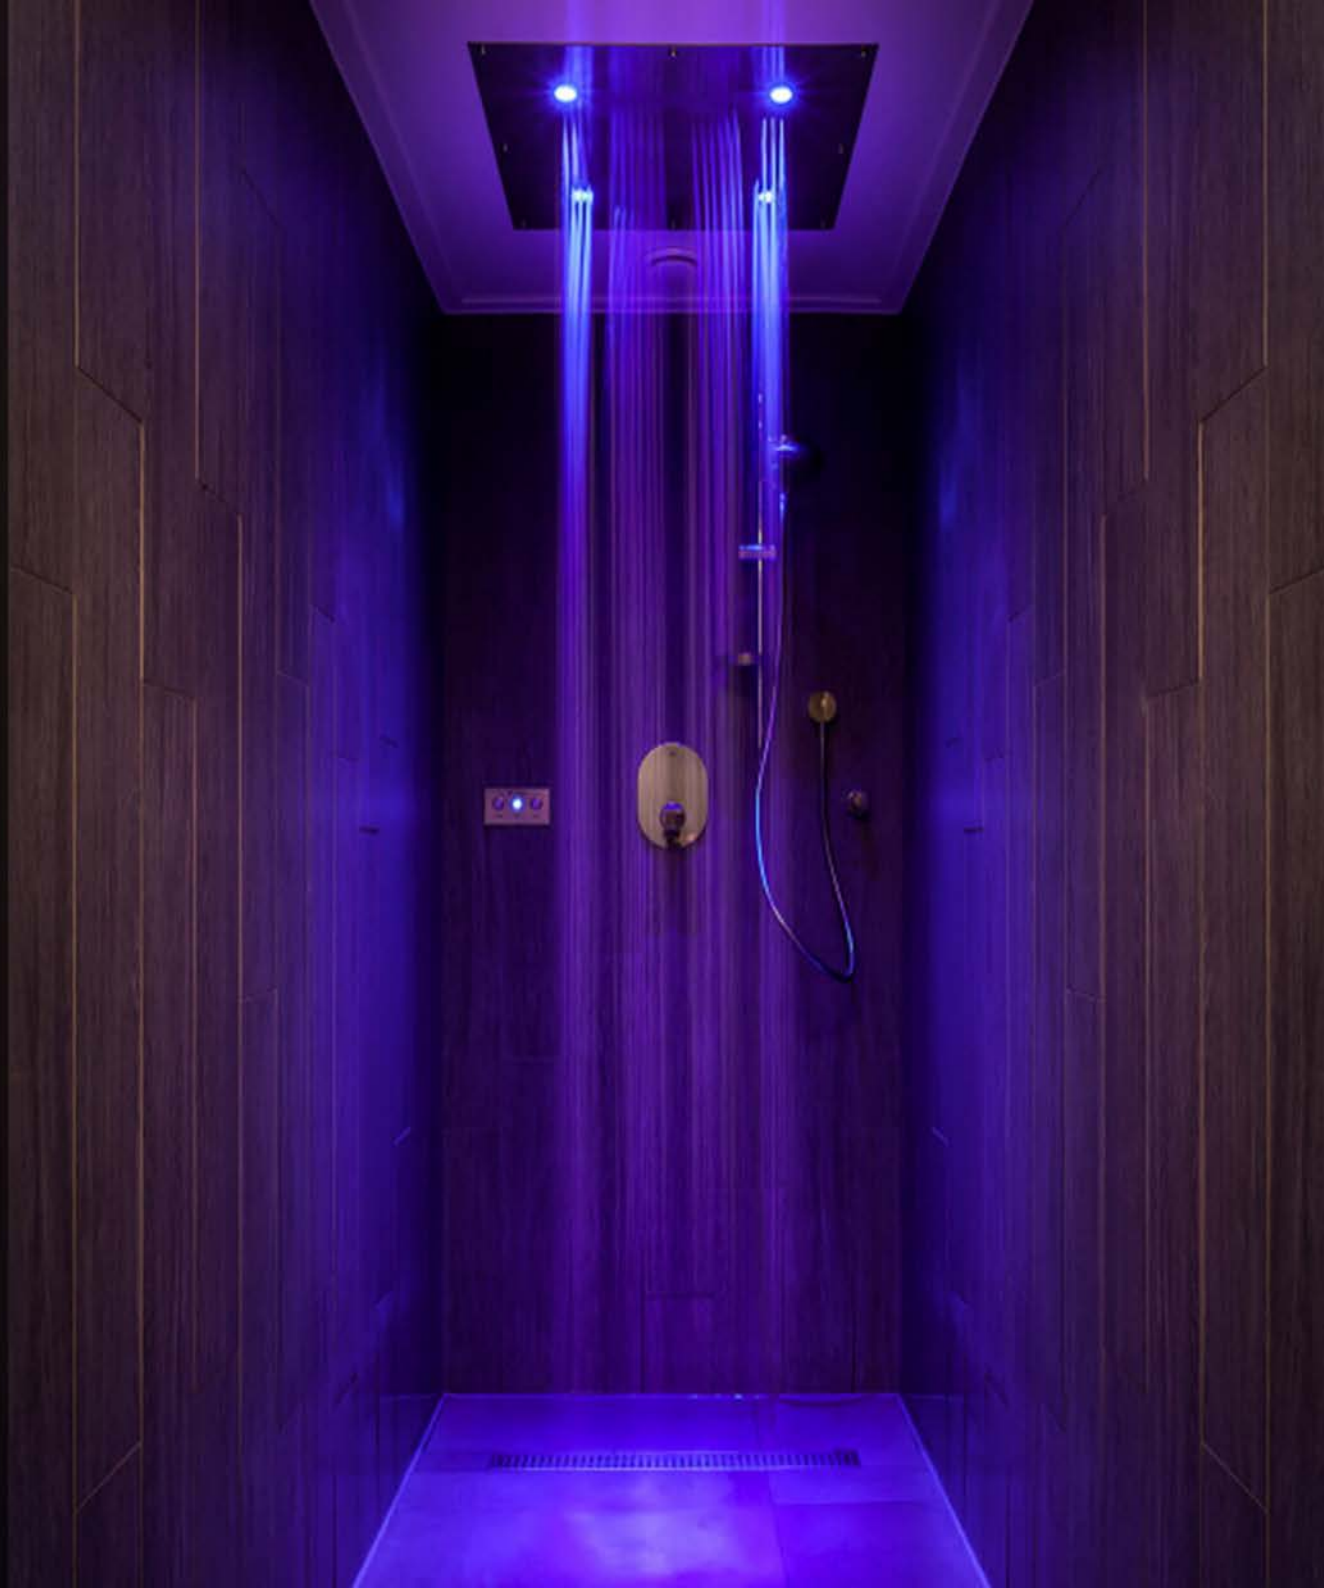

## Experience Showers.

Experience showers transform a simple rinse into a multi-sensory ritual — combining carefully choreographed water effects with lighting, sound, and scent to elevate both body and mind.

Alternating hot and cold water sequences stimulate circulation and recovery, while integrated aromatherapy, ambient lighting, and curated audio environments create a deeply immersive escape.

Popular in luxury spas, wellness centres, and boutique hotels, experience showers can also be tailored for private residences — bringing spa-grade indulgence into the everyday.

TRIDENT designs and installs bespoke experience shower systems, balancing advanced technology with elegant aesthetics to deliver moments of pure restoration.

## Heated Relaxation Loungers.

Sink into warmth and let every muscle unwind. Heated relaxation loungers are designed to follow the natural contours of the body, delivering complete physical ease and enveloping warmth.

Available with either low-pressure hot water (LPHW) or electric heating systems, each lounge is engineered for long-lasting comfort and seamless integration into your wellness space.

Customisable with your choice of high-grade tiling, these loungers combine therapeutic function with sophisticated design — creating the perfect place to pause, reset, and recharge.

## Plant Rooms.

Behind every flawless pool or wellness suite lies a perfectly engineered plant room — the heart of the system, ensuring performance, safety, and efficiency.

TRIDENT designs and delivers commercial and domestic plant rooms as complete turnkey solutions — from initial concept and specification to full installation, testing, and commissioning.

Whether it's a new build, upgrade, or renovation, our services cover everything from precision pipework and filtration to system automation, servicing, and long-term maintenance — all carried out by qualified engineers to the highest industry standards.

## Heating, Cooling & Automation.

TRIDENT integrates the latest in pool technology to ensure optimal comfort, control, and water quality — all tailored to your exact requirements.

We source and install market-leading systems for heating, cooling, chemical dosing, and water quality management — delivering precise performance and effortless automation across every project.

Whether it's ambient temperature control, smart filtration, or fully integrated wellness suite automation, our solutions combine innovation with reliability to keep your environment running at its best.
